

LIFECYCLE PLANNING AND LIFECYCLE MANAGEMENT

Transparency throughout the entire lifespan of purchasing investments for your technology!

A focus on procurement, operating, maintenance and disposal costs

In addition to the technical assessment, the decision to introduce new technology or replace existing technology also requires a commercial assessment. For this, all costs for the planning, project management, migration, operation and servicing/maintenance right through to dismantling must be taken into account alongside the investments.

Our services:

- Establishment of planning assumptions based on processed analysis data (including market and competition)
- Creation of the foundations for your business planning and controlling with regard to budget and resource planning
- Economic study of the product systems and components in use and those envisaged
- Support in strategy implementation with organisation concepts and allocation/supplies management, as well as supervision of strategy implementation with project and change management possible

quattron supports you! Through the evaluation of scenarios and documentation of the planning parameters, quattron is able to expand the LC planning model into an LC controlling model in order to compare the actual developments with the planning assumptions. In this way, it is possible to ensure greater planning security for your project and establish a continuous and methodologically valid learning process in order to incorporate the experiences into future decision-making processes.

Our experts, with almost 20 years of experience in technology projects and applicable innovations from public infrastructure operators, advise you in all relevant aspects on a technical, commercial and organisational level.

Our range of services includes comprehensive support for infrastructure operators in the introduction of new, often safety-related technologies.

quattron is your partner for:

- ERTMS
- ETCS
- GSM-R
- FRMCS
- 5G
- Signalling
- TETRA
