

PROCUREMENT STRATEGY

Efficient determination of and procurement for your needs with avoidance of obsolescence

A focus on the balance between cost savings and dependence on suppliers

Infrastructure operators have to invest very large sums in order to maintain and improve the performance of their infrastructure. Despite this volume, the market for suppliers to the operators is very specialised owing to the requirements. Benefit from quattron's best practice and extensive experience in the procurement and optimisation of technologies for infrastructure operators around the world.

Our services:

- Inventory and data gathering concerning the technical and operational situation
- Definition of a batch structure taking best practices for the avoidance of obsolescence including time planning into account
- Development of the turnkey or single batch options based on the supplier structure
- Evaluation of the possibilities of inclusion of an integrator role in comparison with pure installation procurement
- Calculation and evaluation of the service level to be integrated for servicing, maintenance and operation
- Representation of the dependencies within production, as well as for future technical operation

quattron supports you! You receive procurement scenarios which are ready for a decision to be made, taking operational requirements, avoidance of obsolescence, legal requirements and corporate social responsibility into account! Our experts, with almost 20 years of experience in technology projects and applicable innovations from public infrastructure operators, develop a transparent and efficient solution for you!

Our range of services includes comprehensive support for infrastructure operators in the introduction of new, often safety-related technologies.

quattron is your partner for:

- ERTMS
- ETCS
- GSM-R
- FRMCS
- 5G
- Signalling
- TETRA
