

PROJECT PLANNING

Ensuring your project can be realised through consideration of all key aspects!

A focus on fundamentals, budget and project objective

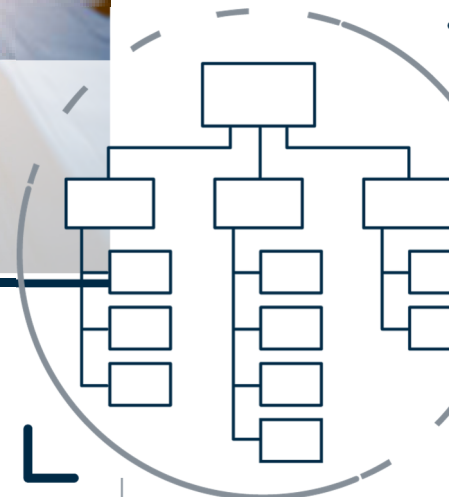

Ensuring that projects can be realised within the time, cost and quality constraints, taking the available resources and existing framework into account, plays a significant role, particularly in complex infrastructure projects which go on for a comparatively long time and have high investment budgets. Transparent visualisation of the project with all project tasks, deadlines, allocated resources and necessary budgets is required for this.

Our services:

- Specification/itemisation of the project goal/objective
- Project structure plan with project overviews
- Project phases and schedule; process design as required
- Capacity and deadline planning
- Cost, benefit, investment planning
- Quality and documentation planning/concept
- Report scheduling/concept
- Risk management system

quattron supports you!

Our experts, with almost 20 years of experience in technology projects and applicable innovations from public infrastructure operators, develop efficient project implementation for you. Implementation of project planning with the help of our programme/project management services is possible at any time.

Our range of services includes comprehensive support for infrastructure operators in the introduction of new, often safety-related technologies.

quattron is your partner for:
